

## Managed Telephone Services

“ Apex Technology has lowered our annual technology operating costs while improving the level of support we receive. They have proved to be outstanding in areas of equipment knowledge, problem solving, and computer skills, and have demonstrated a devoted work ethic towards the city. I would gladly recommend their services to anyone.”

Office of Mayor Leo Fontaine  
City of Woonsocket, RI

Apex provides fully managed “Voice Over IP” (VoIP) telephone solutions for companies of any size. Whether it’s an on-premise or off-site hosted solution, a Cisco Unified Communications platform, a 3Com solution or other hosted VoIP service, Apex does everything. From design, installation and training to ongoing support and maintenance, Apex will manage it all — enabling you to focus on your core business.

We offer integrated voice/data IP carrier circuits and services to mesh nicely with the VoIP system of your choice. And it’s all done seamlessly in one bundled offering with a predictable and affordable monthly expense.

Companies that have previously purchased telephone systems have recognized the costs associated with being their own telephone company. And they still have to deal with the actual telephone companies for the voice, data and internet circuits that work with their systems. However, implementing and managing telephone systems internally is usually cost prohibitive. A better and more affordable option is a managed telephone offering from Apex.
